---

## PROJECTS

### *Alsum Farms Ghana Website*

Developed Alsum Farms Ghana website using React, Tailwind Css and Node Mailer for streamlined communication, enhancing the online presence of the farm mechanization company and deployed on hostinger using git and GitHub.

### *Hopeline Institute*

Developed the Hopeline Institute website for an SME training company, using React, Tailwind Css and Node Mailer, deployed on hostinger using git and github to enhance communication and online presence.

### *Moja Ghana*

Developed Moja Ghana's landing page using React and Tailwind CSS for a responsive and visually appealing design. Implemented Node Mailer for effective communication. Deployed on Hostinger using Git and GitHub for version control and hosting.

### *Content Climb*

Developed Content Climb , a blog generation app, harnesses the capabilities of OpenAI, Tailwind CSS, Next.js, MongoDB, Stripe, and Auth0. Deployed seamlessly on Vercel using Git and GitHub for efficient version control.

### *Blog App*

Developed a simple CRUD blog app with user authentication using the MERN stack. Integrated JWT web tokens for secure user authentication and authorization, ensuring a seamless and secure blogging experience.
